

EMPLOYEE AND PLANT SAFETY
IS A PRIORITY

Shop Safety Course

Any employee who successfully completes this course can print out a completion certificate to put on file at your company.

NTMA-U's Shop Safety Course meets industrial safety needs – at a price that can't be beat!

\$149/employee or \$99/10+ employees

One of the primary workforce issues that many companies face besides finding and developing a highly skilled workforce is safety. Practices that promote safety can help companies establish a competitive advantage by empowering a great culture, reducing costs and complying with safety laws.

Workplace safety can be extremely expensive - medical and insurance costs, workers compensation, survivor benefits, lost wages, damaged equipment and materials, production delays, other workers' time lost, selection and training costs for replacement workers, accident reporting and more.

OSHA strictly regulates company safety practices. OSHA views safety violations very seriously and penalties for violating safety laws can be severe. Companies that violate safety regulations can be fined and held liable for criminal charges.

NTMA's Shop Safety course covers key topics, and is being used by many companies to educate their employees, receive reductions in their insurance rates and help ensure that everyone leaves work the same way they arrived.

Companies that utilize safety training and other illness and injury prevention techniques see increased employee retention, improved productivity, higher morale and job satisfaction along with reductions in injury rates.

Shop Safety Course Topics:

- Intro to Shop Safety
- Machine Guarding
- Lockout / Tagout During Machine Repair
- MSDS
- Safe Lifting
- Bloodborne Pathogens
